## **CLAIMS**

That which is claimed is:

- 1. A distributed system for publishing and retrieving content in a network, comprising: a plurality of computer systems connected together in a peer-to-peer fashion; one or more software applications associated with the computer systems for allowing the computer systems to publish and retrieve content from the network by initiating peer-to-peer interactions across the network using a digital trigger acknowledgement.
- 2 The distributed system of claim 1, wherein the computer systems have characterized network resources that can be contributed to the network in return for viewing an advertisement.
- 3. The distributed system of claim 1, wherein the network resources include any of disk space, bandwidth, and CPU processing cycles.
- 4. The distributed system of claim 1, wherein the interactions are performed by the client-server applications.
- 5. The system of claim 1, wherein each interaction across the network involves a transaction cost.

- 6. The distributed system of claim 1, wherein the content can be retrieved in return for viewing an advertisement.
- 7 The distributed system of claim 1, wherein the content can be retrieved in return for an advertisement being viewed when using the content.
- 8. The distributed system of claim 1, wherein the content can be retrieved in return for an advertisement being viewed while retrieving the content from the network.
- 9. The distributed system of claim 1, wherein the parts of the network may be connected through a wireless connection
- 10. The distributed system of claim 1, wherein the system keeps track of the content.
- 11. A distributed system for publishing and retrieving content in a network, comprising: a plurality of computer systems connected together in a peer-to-peer fashion; one or more software applications associated with the computer systems for allowing the computer systems to publish and retrieve content from the network by initiating peer-to-peer interactions across the network using a digital trigger acknowledgement.
- 12. The distributed system of claim 11, wherein the computer systems have characterized network resources that can be contributed to the network in return for viewing an advertisement.

- 13. The distributed system of claim 11, wherein the network resources include any of disk space, bandwidth, and CPU processing cycles.
- 14. The distributed system of claim 11, wherein the interactions are performed by the client-server applications.
- 15. The system of claim 11, wherein each interaction across the network involves a transaction cost.
- 16. The distributed system of claim 11, wherein the content can be retrieved in return for viewing an advertisement.
- 17 The distributed system of claim 11, wherein the content can be retrieved in return for an advertisement being viewed when using the content.
- 18 The distributed system of claim 11, wherein the content can be retrieved in return for an advertisement being viewed while retrieving the content from the network.
- 19. The distributed system of claim 11, wherein the parts of the network may be connected through a wireless connection.
- 20. The distributed system of claim 11, wherein the system keeps track of the content.
